CLEAN VERSION OF PENDING CLAIMS

Claims 1-7 (cancelled).

Claim 8 (original). A method for processing a surface of a semiconductor wafer comprising the steps of:

- a) removing a material layer overlying a barrier layer from the wafer surface at a primary polishing station with a primary polishing pad; and
- b) removing the barrier layer from the wafer surface at a buff station using a set of buff station parameters.

Claim 9 (original). The method of claim 8, further comprising the step of buffing the wafer surface after barrier layer removal.

Claim 10 (previously amended). The method of claim 9, wherein a set of buff station parameters are different for the barrier layer removal step than for the buffing step.

Claim 11 (original). The method of claim 8, wherein a different slurry composition is used for the barrier layer removal step than for the buffing step.

Claim 12 (original). The method of claim 8, further comprising the step of detecting when the material layer is substantially removed from the wafer.

Claim 13 (original). The method of claim 8, further comprising the step of detecting a point at which barrier layer removal is substantially complete.

SFI 718D1

Claim 14 (previously amended). The method of Claim 13, wherein the step of detecting a point at which barrier layer removal is substantially complete is accomplished using an endpoint detection system.

Claim 15 (previously amended). The method of claim 14, wherein the endpoint detection system is comprised of an optical detection system.

Claim 16 (previously amended). The method of Claim 14, wherein the endpoint detection system is comprised of an infra red detection system.

Claim 17 (previously amended). The method of Claim 14, wherein the endpoint detection system is comprised of a laser detection system.

Claim 18 (previously amended). The method of Claim 14, wherein the endpoint detection system is comprised of a motor current detection system.

Claim 19 (original). The method of claim 8 further comprising the step of conditioning the buff station pads.

Claim 20 (original). The method of claim 19 wherein the conditioning step is accomplished by pressing a lower buff pad against an upper buff pad and rotating each pad at a different velocity.

SFI 718D1

Claim 21 (original). The method of claim 19, wherein the pad conditioning step is performed between each wafer being processed.

Claim 22 (cancelled).

Claim 23 (original). The method of claim 8, wherein the material layer is comprised of aluminum, copper, or tungsten.

Claim 24 (original). The method of claim 8, wherein the barrier layer is comprised of Ti, TiN, Ta, or TaN.

Claim 25 (original). The method of claim 8, further comprising the step of:

- c) supplying a first polishing slurry to the primary polishing station; and
- d) supplying one or more different polishing slurries to the buff station.
